Problem Statement

The problem at hand is the inefficient dissemination of valuable opportunities and information to college students. Currently, students receive numerous emails regarding internships, projects, courses, talk sessions, events, and workshops. However, these emails often go unnoticed, get lost in overflowing inboxes, or end up in spam folders. As a result, students miss out on crucial opportunities that could enhance their academic, professional, and personal growth. The lack of a centralized and streamlined platform leads to frustration, wasted time, and missed chances for students to engage with valuable resources.

Solutions

The solution of this problem is the development of a dedicated website. This website will serve as a centralized platform, providing streamlined access to internships, projects, courses, talk sessions, events, and workshops. By leveraging technology and user-centric design principles, the website will enhance accessibility, personalization, and engagement for college students.

Key Features

- Personalized Filtering and Search
- User Friendly Interface
- Notification and reminder
- Discussion and Forums

Impact

Impact of this solution

- Enhanced Access to Opportunities
- Improved Efficiency and Time Management
- Optimization of Resources
- Increased Engagement and Participation
- Empowerment and Growth
